

CLAIMS

1. A sleeping device, such as a pillow, mattress or quilt, wherein the sleeping device comprises a first layer (113, 121, 131) of a material having temperature regulating properties and a second layer of down filling (111, 123, 129).
5
2. A sleeping device according to claim 1, wherein the temperature regulating material comprises a phase change material.
3. A sleeping device according to claim 1, wherein the sleeping device comprises a tick (109, 115) defining the outer surface of the sleeping device,
10 wherein the tick on the inside is directly followed by said first layer of temperature regulating material (113, 125).
4. A sleeping device according to claim 3, wherein the tick defines two outer
15 surfaces, which can be used as the surface being in contact with a user, and wherein the tick is directly followed by said first layer of temperature regulating material (113, 125) on the inside of one of the outer surfaces (133, 135).
5. A sleeping device according to claim 3, wherein the tick comprising the
20 first layer of temperature regulating material is split into channels by splitting walls (116).
6. A sleeping device according to claim 1, wherein the down filling comprises
25 goose downs.
7. A sleeping device according to claim 1, wherein the sleeping device is a quilt (103).
8. A sleeping device according to claim 1, wherein the sleeping device is a
30 pillow (101).
9. A sleeping device according to claim 1, wherein the sleeping device is a mattress (105).
